Rocketseat bootcamp
Explorer (Full-stack developer course)
Jan 2024 - Sep 2024

LANGUAGES

- English, fluent
- Portuguese, native
- French, basic

SKILLS

Backend:
NODE.JS, ASP.NET, C#, JS, Python, SQLite, DynamoDB, Postgres, AWS lambda, Amplify, S3, API gateway

Frontend:
HTML/CSS, JS, Bootstrap, React native, React JS, WordPress

EXPERIENCE AND PROJECTS

Freelancer Full Stack web developer, Worldwide
Sep 2023 - Present

Lazy Lizard Restaurant Website, www.lazylizardpub.ca
- Fullstack developer (mostly backend), UI/UX Designer │ Freelance │ Nov 2024
- **Backend:** Developed a serverless RESTful API using Node.js and Express.js on AWS Lambda, integrated with DynamoDB for database management, API Gateway for routing, and S3 for file storage.
- **Frontend:** I primarily focused on backend development but also contributed to the frontend, which was built with React.js and deployed using AWS Amplify.
- Lazy Lizard Restaurant needed a website to showcase their business, with a strong emphasis on their menu. One of their key requests was the ability to easily update the menu, especially for daily specials. **I designed the website in Figma and worked primarily on the backend but also contributed for the frontend.**

Food Explorer, github.com/iYagoMR/food-explorer-front/ (read github readme)
- Full Stack Developer │ Personal Project │ Aug 2024
- Developed a DoorDash-like web application using Node.js(express) for the backend and React.js for the frontend. The app includes customer and admin views, with features like a shopping cart, checkout process, user favorites, and an admin order management panel. Technologies used include SQLite for the database, Redux for state management, and a RESTful API for communication between the frontend and backend.

Haver & Boecker NCR App, haverdemo2024.azurewebsites.net/
- Full Stack Developer │ College Project │ Jul 2024
- This web app was developed during a college competition involving 7 teams, my team's project was amongst the best ones. Haver & Boecker Niagara requested the development of an app to enhance their Non-Conformance Reporting (NCR) system, which was previously managed through an outdated and user-unfriendly method. The app was built on ASP.NET and is fully responsive. **In this project i worked as the team leader and as a Full stack developer.**

Lazy lizard restaurant Pizza maker, dishwasher
St. Catharines, ON │ Jun 2023 - Present

- Worked in a fast-paced environment, efficiently making pizzas while multitasking to handle dishwashing duties as needed.
- Consistently met high-volume demands while maintaining quality and cleanliness. Adapted quickly to changing priorities and collaborated effectively with colleagues to ensure smooth operations during busy shifts.
